Join Order Benchmark

This package contains the **Join Order Benchmark** (JOB) queries from:
"How Good Are Query Optimizers, Really?"
by Viktor Leis, Andrey Gubichev, Atans Mirchev, Peter Boncz, Alfons Kemper, Thomas Neumann
PVLDB Volume 9, No. 3, 2015
http://www.vldb.org/pvldb/vol9/p204-leis.pdf

This repository is not maintained by the original authors of the Join Order Benchmark. The purpose is to ease the distribution of Join Order Benchmark queries (e.g., as a git submodule).

Please be aware that the queries assume the data set from the original paper (see below for the CWI link). The queries might yield unexpected results when used on the "Frozen Data Set" generated by the step-by-step instructions below.

IMDB Data Set

The CSV files used in the paper, which are from May 2013, can be found at http://event.cwi.nl/da/job/imdb.tgz

The license and links to the current version IMDB data set can be found at http://www.imdb.com/interfaces

Step-by-step instructions

1. download `*gz` files (unpacking not necessary)

```
wget ftp://ftp.fu-berlin.de/misc/movies/database/frozendata/*gz
```

2. download and unpack `imdbpy` and the `imdbpy2sql.py` script

```
wget https://bitbucket.org/alberanid/imdbpy/get/5.0.zip
```

3. create PostgreSQL database (e.g., name imdbload):

```
createdb imdbload
```

4. transform `*gz` files to relational schema (takes a while)

```
imdbpy2sql.py -d PATH_TO_GZ_FILES -u postgres://username:password@hostname/imdbload
```

Now you should have a PostgreSQL database named `imdbload` with the imdb data. Note that this database has some secondary indexes (but not on all foreign key attributes). You can export all tables to CSV:

```
\copy aka_name to 'PATH/aka_name.csv' csv
\copy aka_title to 'PATH/aka_title.csv' csv
\copy cast_info to 'PATH/cast_info.csv' csv
\copy char_name to 'PATH/char_name.csv' csv
\copy comp_cast_type to 'PATH/comp_cast_type.csv' csv
\copy company_name to 'PATH/company_name.csv' csv
\copy company_type to 'PATH/company_type.csv' csv
\copy complete_cast to 'PATH/complete_cast.csv' csv
\copy info_type to 'PATH/info_type.csv' csv
\copy keyword to 'PATH/keyword.csv' csv
\copy kind_type to 'PATH/kind_type.csv' csv
\copy link_type to 'PATH/link_type.csv' csv
\copy movie_companies to 'PATH/movie_companies.csv' csv
```

```
\copy movie_info to 'PATH/movie_info.csv' csv
\copy movie_info_idx to 'PATH/movie_info_idx.csv' csv
\copy movie_keyword to 'PATH/movie_keyword.csv' csv
\copy movie_link to 'PATH/movie_link.csv' csv
\copy name to 'PATH/name.csv' csv
\copy person_info to 'PATH/person_info.csv' csv
\copy role_type to 'PATH/role_type.csv' csv
\copy title to 'PATH/title.csv' csv
```

To import the CSV files to another database, create all tables (see `schema.sql` and optionally `fkindexes.sql`) and run the same copy as above statements but replace the keyword "to" by "from".

Questions

Contact Viktor Leis (leis@in.tum.de) if you have any questions.
