1.0 Release Contents

This release of the database can be downloaded in several formats. The contents of each version are listed below.

MS Access Versions:
      lahman_1871-2025.mdb
      readme2025.txt

MSSQL Versions:
      lahman2025.bak
      readme2025.txt

Comma Delimited Version:
      readme.txt
      AllStarFull.csv
      Appearances.csv
      AwardsManagers.csv
      AwardsPlayers.csv
      AwardsShareManagers.csv
      AwardsSharePlayers.csv
      Batting.csv
      BattingPost.csv
      CollegePlaying.csv
      Fielding.csv
      FieldingOF.csv
      FieldingPost.csv
      FieldingOFsplit
      HallOfFame.csv
      HomeGames.csv
      Managers.csv
      ManagersHalf.csv
      Parks.csv
      People.csv

      Schools.csv
      SeriesPost.csv
      Teams.csv
      TeamsFranchises.csv
      TeamsHalf.csv

-
1.1 Introduction

This database contains pitching, hitting, and fielding statistics for Major League Baseball from 1871 through 2025. It includes data from
the two current leagues (American and National) and the following other major

leagues, as recognized by SABR:

National Association (1871-1875)
American Association (1882-1891)
Union Association (1884)
Players League (1890)
Federal League (1914-1915)
Negro National League I (1920–1931)
Eastern Colored League (1923–1928)
American Negro League (1929)
East-West League (1932)
Negro Southern League (1932)
Negro National League II (1933–1948)
Negro American League (1937–1950)

In addition, Negro League barnstorming/independent teams from 1891-1936 are included in the data under pseudo-leagues labeled "Eastern Independent Clubs," "Independent Clubs," and "Western Independent Clubs." While these clubs were not part of established leagues, they have been selected as major league caliber in light of the economic and social conditions that forced them to play outside a typical league structure.

This database was created by Sean Lahman, who pioneered the effort to make baseball statistics freely available to the general public. What started as a one-man effort in 1994 has grown tremendously, and now a team of researchers has collected their efforts to make this the largest and most accurate source for baseball statistics available anywhere. (See Acknowledgements below for a list of the key contributors to this project.)

None of what we have done would have been possible without the pioneering work of Hy Turkin, S.C. Thompson, David Neft, and Pete Palmer (among others). All baseball fans owe a debt of gratitude to the people who have worked so hard to build the tremendous set of data that we have today. Our thanks also to the many members of the Society for American Baseball Research who have helped us over the years. We strongly urge you to support and join their efforts. Please visit their website (www.sabr.org).

If you have any problems or find any errors, please let us know. Any feedback is appreciated at lahmandb@sabr.org.

1.2 What's New

The Seamheads Negro League data, which was added this past October, has special notes in 2.1 Notes on Negro League data.

-

1.3 Acknowledgements

Much of the raw data contained in this database comes from the work of Pete Palmer, the legendary statistician, who has had a hand in most of the baseball encyclopedias published since 1974. He is largely responsible for bringing the batting, pitching, and fielding data out of the dark ages and into the computer era. Without him, none of this would be possible. For more on Pete's work, please read his own account at: http://sabr.org/cmsfiles/PalmerDatabaseHistory.pdf

Three people have been key contributors to the work that followed, first by taking the raw data and creating a relational database, and later by extending the database to make it more accessible to researchers.

Sean Lahman launched the Baseball Archive's website back before most people had heard of the World Wide Web. Frustrated by the lack of sports data available, he led the effort to build a baseball database that everyone could use. He created the first version of the database and began to make it available for free download from his website in 1995.

The work of Sean Forman to create and maintain an online encyclopedia at Baseball-Reference.com was a quantum leap for both fans and researchers. The website launched in 2000, providing a user-friendly interface to the Lahman Baseball Database. Forman and Lahman launched the Baseball Databank in 2001, a group of researchers whose goal was to update and maintain the database as an open-source collection available to all.

Ted Turocy has done the lion's share of the work to update the main data tables during the 2010s, automating the work of annual updates and linking historical data to play-by-play accounts compiled by Retrosheet.

A handful of researchers have made substantial contributions to maintain this database over the years. Listed alphabetically, they are: Derek Adair, Mike Crain, Kevin Johnson, Rod Nelson, Tom Tango, and Paul Wendt. These folks did much of the heavy lifting and are largely responsible for the improvements made since 2000.

Others who made important contributions include: Dvd Avins, Clifford Blau, Bill Burgess, Clem Comly, Jeff Burk, Randy Cox, Mitch Dickerman, Paul DuBois, Mike Emeigh, F.X. Flinn, Bill Hickman, Jerry Hoffman, Dan Holmes, Micke Hovmoller, Peter Kreutzer, Danile Levine, Bruce Macleod, Ken Matinale, Michael Mavrogiannis, Cliff Otto,

Alberto Perdomo, Dave Quinn, John Rickert, Tom Ruane,
Theron Skyles, Hans Van Slooten, Michael Westbay, and Rob Wood.

Many other people have made significant contributions to the database over the years. The contribution of Tom Ruane's effort to the overall quality of the underlying data has been tremendous. His work at Retrosheet.org integrates the yearly data with the day-by-day data, creating a reference source of startling depth.

Sean Holtz helped with a major overhaul and redesign before the 2000 season. Keith Woolner was instrumental in helping turn a huge collection of stats into a relational database in the mid-1990s. Clifford Otto & Ted Nye also helped provide guidance to the early versions. Lee Sinnis, John Northey & Erik Greenwood helped supply key pieces of data. Many others have written in with corrections and suggestions that made each subsequent version even better than what preceded it.

The work of the SABR Baseball Records Committee, led by Lyle Spatz, has been invaluable. So has the work of Bill Carle and the SABR Biographical Committee. David Vincent, keeper of the Home Run Log and other bits of hard-to-find info, was always helpful. The recent addition of colleges to player bios is the result of much research by members of SABR's Collegiate Baseball committee.

Salary data was first supplied by Doug Pappas, who passed away during the summer of 2004. He was the leading authority on many subjects, most significantly the financial history of Major League Baseball. We are grateful that he allowed us to include some of the data he compiled. His work has been continued by the SABR Business of Baseball committee.

Thanks are also due to the staff at the National Baseball Library in Cooperstown, who have been so helpful over the years, including Tim Wiles, Jim Gates, Bruce Markusen, and the rest of the staff.

A special debt of gratitude is owed to Dave Smith and the folks at Retrosheet. There is no other group working so hard to compile and share baseball data. Their website (www.Retrosheet.org) will give you a taste of the wealth of information Dave and the gang have collected.

Starting in 2023, the Lahman Database is updated and generated by Bryan Walko, who learned how to use databases from this very same Lahman Database back in the late 1990s.

The HallOfFame data has been expanded with the permission of Graham Womack and his fantastic research into Known Veterans and Era Committee candidates, 1953-current, with some additional data researched and deduced by Bryan Walko. This provides us valuable insight into not just the people who were voted in by these committees, but also what we know about those who were considered

over time.

Thank you, Sean, for donating the database to SABR, for overseeing the database for three decades, and for providing our first steps
into research during the Internet era.

Thanks to all contributors great and small. What you have created is a wonderful thing.

1.4 Using this Database

This version of the database is available in Microsoft Access format, SQL files, or in a generic, comma-delimited format. Because this
is a relational database; you will not be able to use the data in a flat-database application.

Please note that this is not a stand alone application. It requires a database application or some other application designed specifically
to interact with the database.

If you are unable to import the data directly, you should download the database in the delimited text format. Then use the documentation
in section 2.0 of this document, to import the data into your database application.

1.5 Revision History

Version	Date	Comments
1.0	December 1992	Database ported from dBase
1.1	May 1993	Becomes fully relational
1.2	July 1993	Corrections made to full database
1.21	December 1993	1993 statistics added
1.3	July 1994	Pre-1900 data added
1.31	February 1995	1994 Statistics added
1.32	August 1995	Statistics added for other leagues
1.4	September 1995	Fielding Data added
1.41	November 1995	1995 statistics added
1.42	March 1996	HOF/All-Star tables added
1.5-MS	October 1996	1st public release - MS Access format
1.5-GV	October 1996	Released generic comma-delimited files
1.6-MS	December 1996	Updated with 1996 stats, some corrections
1.61-MS	December 1996	Corrected error in MASTER table
1.62	February 1997	Corrected 1914-1915 batters data and updated
2.0	February 1998	Major Revisions-added teams & managers
2.1	October 1998	Interim release w/1998 stats

2.2	January 1999	New release w/post-season stats & awards added
3.0	November 1999	Major release - fixed errors and 1999 statistics added
4.0	May 2001	Major release - proofed & redesigned tables
4.5	March 2002	Updated with 2001 stats and added new biographical data
5.0	December 2002	Major revision - new tables and data
5.1	January 2004	Updated with 2003 data, and new pitching categories
5.2	November 2004	Updated with 2004 season statistics.
5.3	December 2005	Updated with 2005 season statistics.
5.4	December 2006	Updated with 2006 season statistics.
5.5	December 2007	Updated with 2007 season statistics.
5.6	December 2008	Updated with 2008 season statistics.
5.7	December 2009	Updated for 2009 and added several tables.
5.8	December 2010	Updated with 2010 season statistics.
5.9	December 2011	Updated for 2011 and removed obsolete tables.
2012	December 2012	Updated with 2012 season statistics
2013	December 2013	Updated with 2013 season statistics
2014	December 2014	Updated with 2014 season statistics
2015	December 2015	Updated with 2015 season statistics
2016	February 2017	Updated for 2016 and added several tables
2017	March 2018	Updated for 2017
2018	February 2019	Updated for 2018
2019	February 2020	Updated for 2019
2020	February 2021	Updated for 2020
2021	February 2022	Updated for 2021
2022	February 2023	Updated for 2022
2023	April 2024	Updated for 2023, corrected 2022 catcher fielding SB and CS, standardized award names across award tables Added non-appearing players to 2022 All-Star data, replaced #INF data in some tables, extended length of needed_note on HallOfFame table so additional information could be included.
2024	July 2025	Updated for 2024 Researched retirements from 2020-2025 to better identify players who should have their last game updated Updated biographical information for people where it differed in Retrosheet and Chadwick Corrected 2023 team data for DP and SHO, which were mistakenly presented as sums of the player totals and not team level stats Corrected team data where the stadium was incorrect for some clubs between 2019-2023 Corrected park data for ARL03, which was mistakenly named Field of Dreams and not Globe Life Field Removed 2023 data from FieldingOF, which was only intended to go until 1955

			Standardized all state/province data for US, Canada, and Australia to use the postal codes only
			Filled in state data with known state/province/department/county/etc. data for all places of birth and death
			Corrected data where City, State, Country were misplaced in the fields
			Foreign placenames will now have diacritics for cities and states
			Standardized states for foreign countries (ex: Baden-Württemberg will always be Baden-Württemberg, not BW,
			Baden Württemberg, Baden-Wurttemberg, Baden, or Württemberg, etc.)
			Added historical data for the following awards: All-MLB Team awards, Bob Feller Act of Valor Awards,
			MLB Players Choice awards, Pitcher of the Month, Player of the Month, Player of the Week, Reliever of the Month,
			Rookie of the Month, This Year in Baseball (MLB.com / Esurance) awards, TSN Comeback Player of the Year,
			TSN Pitcher of the Year, TSN Reliever of the Year, TSN Rookie of the Year, TSN Rookie Pitcher of the Year,
			TSN Rookie Player of the Year
2024.01	July 2025	Corrected extended characters in Access People table. Corrected Rob Thomson's 2022 season with Phillies.	
			Removed comma from Bob Troy's deathCity field.
2024.02	July 2025	Corrected 2024 data where teams were incorrectly mapped to their franchiseID. Corrected AllStarFull data that	
			mapped Milwaukee Braves to non-existent ID teamID. Fixed Appearances and FieldingOF for Frank Thompson that
			were still aligned to the phantom player Andrew Thompson.
2024.03	July 2025	Corrected 2024 data where LAA was miskeyed as ANA. (Thank you Mark K.)	
2024.04	July 2025	Corrected duplication in AllStarFull for 1962 and 2022. Corrected teamIDs for Angels (1997-2004) and	
			Brewers (1970-1997). Corrected duplicates for Billy Herman (1934), Dave Freese (2012), and Shohei
			Ohtani (2021). Ohtani's 2021 record records starting position as 1;10, since he started two positions
			in that game, per the MLB. Corrected Angels in Appearances to the correct teamID for 2023. Added new
			records to People that were in the HallOfFame file but missing from People. This includes Bud Fowler,
			along with

baseball executives, owners, and umpires.
2024u Oct 2025 Added Negro League data. See 2.1 Notes on Negro League data.
2025 Dec 2025 Updated with 2025 data.
Added cross-reference IDs for Baseball-Reference and Retrosheet for many Negro League players.
Further standardized City, State and Country data.
Re-removed G_batting and G_old from the Batting table which were removed in 2014 but somehow snuck back in.
Updated batter strikeouts for AL 1911 and 1912.
Removed extra batting record for Bull Smith (which was found to be Eddie Ainsmith in later research.)
Removed extra Appearance record for Jim Hall (which found to be Charley Jones in later research).
Corrected players who had a final game that was before their last Appearance record.
Reworked Access database to match data sizes in SQL database. Primarily fixes a problem for Negro League data,
lgID was being truncated to 2 characters when 3 characters are needed to properly identify them. (Thanks Mitch S.)
Data fixes at https://docs.google.com/spreadsheets/d/18N2KMplQ5IWElj9FU_Vw9Pgtc7GQH3mqKP8INEYxKCk/edit?usp=sharing

---

2.0 Data Tables

The design follows these general principles. Each player is assigned a unique number (playerID). All of the information relating to that player is tagged with his playerID. The playerIDs are linked to names and birthdates in the People table.

The database is comprised of the following main tables:

People	Player names and biographical information
Teams	Yearly stats and standings
TeamFranchises	Franchise information
Parks	List of major league ballparks
Batting	Batting statistics
Pitching	Pitching statistics
Fielding	Fielding statistics

FieldingOF	Outfield position data for years where LF/CF/RF fielding data is available, until 1955
FieldingOFsplit	LF/CF/RF game played splits for all years, including those where LF/CF/RF fielding data is not available
Appearances	Details on the positions a player appeared during a season
Managers	Managerial statistics

It is supplemented by these tables:

AllStarFull	All-Star appearances
BattingPost	Post-season batting statistics
PitchingPost	Post-season pitching statistics
FieldingPost	Post-season fielding data
SeriesPost	Post-season series information
HomeGames	Number of home games played by each team in each ballpark
ManagersHalf	Split season data for managers
TeamsHalf	Split season data for teams
AwardsManagers	Awards won by managers
AwardsPlayers	Awards won by players
AwardsShareManagers	Award voting data for manager awards
AwardsSharePlayers	Award voting data for player awards
HallofFame	Hall of Fame voting data
CollegePlaying	List of players and the colleges they attended (last updated 2014)
Salaries	Player salary data (last updated 2016)
Schools	List of colleges that players attended (last updated 2014)

PEOPLE TABLE

ID	Numeric ID, not used anywhere else.
playerID	A unique code assigned to each player. The playerID links the data in this file with records in the other files.
birthYear	Year player was born
birthMonth	Month player was born
birthDay	Day player was born
birthCity	City where player was born
birthCountry	Country where player was born
birthState	State where player was born
deathYear	Year player died
deathMonth	Month player died
deathDay	Day player died
deathCountry	Country where player died

deathState	State where player died
deathCity	City where player died
nameFirst	Player's first name
nameLast	Player's last name
nameGiven	Player's given name (typically first and middle)
weight	Player's weight in pounds
height	Player's height in inches
bats	Player's batting hand (left, right, or both)
throws	Player's throwing hand (left or right)
debut	Date that player made first major league appearance
bbrefID	ID used by Baseball Reference website
finalGame	Date that player made last major league appearance
retroID	ID used by Retrosheet

TEAMS TABLE

yearID	Year
lgID	League
teamID	Team
franchID	Franchise (links to TeamsFranchise table)
divID	Team's division
Rank	Position in final standings
G	Games played
GHome	Games played at home
W	Wins
L	Losses
DivWin	Division Winner (Y or N)
WCWin	Wild Card Winner (Y or N)
LgWin	League Champion (Y or N)
WSWin	World Series Winner (Y or N)
R	Runs scored
AB	At bats
H	Hits by batters
2B	Doubles
3B	Triples
HR	Homeruns by batters
BB	Walks by batters
SO	Strikeouts by batters
SB	Stolen bases
CS	Caught stealing
HBP	Batters hit by pitch
SF	Sacrifice flies
RA	Opponents runs scored
ER	Earned runs allowed
ERA	Earned run average
CG	Complete games
SHO	Shutouts (team level)
SV	Saves
IPOuts	Outs Pitched (innings pitched x 3)

HA	Hits allowed
HRA	Homeruns allowed
BBA	Walks allowed
SOA	Strikeouts by pitchers
E	Errors
DP	Double Plays (team level)
FP	Fielding percentage
name	Team's full name
park	Name of team's home ballpark
attendance	Home attendance total
BPF	Three-year park factor for batters
PPF	Three-year park factor for pitchers
teamIDBR	Team ID used by Baseball Reference website
teamIDlahman45	Team ID used in Lahman database version 4.5
teamIDretro	Team ID used by Retrosheet

-
TEAM FRANCHISES TABLE

franchID	Franchise ID
franchName	Franchise name
active	Whether team is currently active or not (Y or N)

schoolNick	Nickname for school's baseball team

2.1 Notes on Negro League data

Seamheads data for the Negro League is now in the database. The data here constitutes major league data as per SABR's recommendations from Feb 11, 2021 (https://sabr.org/latest/sabr-negro-leagues-task-force-issues-recommendations-on-major-league-status/) and Jun 3, 2024 (https://sabr.org/latest/sabr-special-committee-acknowledges-1949-50-negro-american-league-independent-black-baseball-teams-as-major-league-caliber/).

The recovery of this data is an ongoing process, and changes can and will occur when new sources are located and compiled. The definitions of the teams and games that qualify as major leagues may also differ across datasets (SABR, Seamheads, MLB, Retrosheet, Baseball Reference, etc.) This database reflects SABR's current recommendations.

Playing level of data
All Negro League data within the Lahman database reflects major league caliber league and independent team competition. It does not include exhibitions of any level (majors, minors, or semi-pro), nor does it include games within Cuban leagues. In all cases below, read any reference to data, stats, games, teams, leagues, etc. within this context.

NULLs
Missing data within the Negro Leagues dataset will be represented by NULL values, rather than zeros, in the same way that existing National League seasons in the 1800s may have NULL values for caught stealing. In both cases, the

NULLs represent that the value is unknown. First names can also have NULLs.

The 1939 Toledo Crawfords played in two leagues
Given the barnstorming nature of major league teams of Black baseball and the Negro Leagues, it is feasible that a single team may play within more than a single league that qualifies as major league (or within a major league and barnstorming/independent games that qualify as major league) in a single year.

Currently, there are no teams that played both major league games and barnstorming/independent games that qualify as major league in a single year.

There is one team that played in more than one major league in a single year, the 1939 Toledo Crawfords, who played in the Negro American League and the second Negro National League. Within this database, this is represented as two separate team IDs for 1939 (TC and TC2) that belong to one franchise (PC). This is a unique situation within the database, and we believe it is the best way to present this data. However, it is atypical and therefore specially noted here.

On colleges
Seamheads has compiled a good list of colleges for people within the dataset. When reviewing this data, I discovered that many of the schools still existed under different names. Many were already in the Lahman school list. I briefly considered keying the old data to the current schools, but I declined to do that for the sake of keeping the history intact. I also did not want to change the table schema or have the name field of the college be a list of names.
I decided to take these old names of the schools and put them as new rows in the Schools table, but use the key for the current school with a year suffix that corresponds to the first year that name was used.

As a practical example, Howard Millon attended Illinois State Normal University. Today, this school is known as Illinois State University. It was called Illinois State Normal University from 1957-1964. In order to keep the identity of the school as it was when Millon attended, there will be a new school record for Illinois State Normal University with a schoolID of illinoisst1857, which will tie it to Illinois State University, which has a schoolID of illinoisst.
I have also taken a school like New Orleans University, which exists today as Dillard University, and given it the key of dillard1869.

The Negro League college data lacks years, so the years in here will be NULL.

Team and Player level data
Due to the incomplete nature of Negro League data, there may be instances where game-level data is available but player-level data is not available. This can result in player-level data not adding up to team level data.

Team record against all teams versus team record within league
Teams within leagues also played games outside of league competition against independent major league caliber Negro League teams. Because of this most Seamheads

team records will have wins, losses, and ties within the league and against all clubs. For the first iteration of Lahman, the records on the team table will reflect the league level w/l/t data. For independent teams that lacked a league, the same data will reflect their record against all teams.

Player data against all teams versus within league
All player-level data is in the context of against all teams.

AllstarFull
There are six new "Leagues" within the data: NOS (North All Stars) and SAS (South All Stars) from the North-South series, WES (West All Stars) and EAS (East All Stars)
from the East-West series, and NNN (Negro National League II North All Stars) and NNS (Negro National League II South All Stars). Teams for the players will reflect the
primary team they were on that season (in terms of games played). There are cases where the only major league games that were played in that season were the All Star Games, and in these cases I have looked back one season, then forward one season, then back two seasons, etc. until I located a team. There are two players in the data who only played on the All Star team during their known major league career. S. M. Humphries in 1937 (who played on the independent non-major league Atlanta Black Crackers) and Peppy Collins in 1939 (who has no other major league playing record). GameNum and gameID will be NULL, as we have the cumulative data for the year
not individual games within this dataset. With this, the startingPos field can have multiple positions, in a format like 3;6, if the player started one game at 1B and another game at SS. The order of the data does not indicate the first or second game of a multiple-game record.

Appearances
GS will be NULL for many seasons. G_defense and g_of, both of which record distinct games on defense, not a simple sum of positional data. The dataset does not include this level of granularity to tell when a player appeared at multiple positions during the same game.

FieldingOF
FieldingOF is not used as all the data is at the LF/CF/RF level.

Managers
Some teams do not have a known manager and these teams will not have a record within the Manager table.

ManagersHalf
There were several seasons with First and Second half champions for many Negro Leagues between 1925-1948. The exact records and standings are not within the dataset for each half. Therefore, the ManagersHalf table will not have any data for the Negro Leagues at this time.

SeriesPost and other Post tables
Round IDs are:

ALC (NAL Championship Series)
NWS (Negro League World Series)
NNC (NNL I Championship Series)
NLC (NNL II Championship Series)
NLP (NNL II Playoff Series)
NSC (NSL Championship Series)

TeamsHalf
There were several seasons with First and Second half champions for many Negro Leagues between 1925-1948. The exact records and standings are not within the dataset for each half. However, the TeamsHalf table has been updated with the known First and Second half champions, leaving the record blank with a Rank of 1. Other teams outside the first place finish are not recorded in the table.
