Northwind 2.0 Developer Edition: Product Categories

Ala Arman

▶ *Applies To*

Select any topic below to learn about Product Categories in the Northwind Developer Edition.

Overview

Only this Developer Edition of the Northwind Product Categories sample application has the Product Categories module. In the Starter Edition, Product Category is a field in the Products table. The Developer Edition expands upon the database schema (tables used) in the Starter Edition and uses more advanced features. It is meant to introduce you to the major features of Microsoft Access, not to run any specific business.

Using Product Categories

In Northwind 2.0 Developer Edition, product categories are available via the **System Admin** button on the custom **Home** tab.

Programming Product Categories

In this section, we address noteworthy implementation details of the Product Categories form **sfrmProductCategories.**

- The Product Categories form gets its data from a simple, single-table query, **qryProductCategories** (see **RecordSource** property). Best practice is to base a data entry form on a simple query.
- This form uses a listbox to drive form navigation. When the user selects a category from the listbox, the listbox's **AfterUpdate** event moves the form's **recordset** bookmark to the selected category's detail record.
- Product Categories also helps us **Att** of each product category. In the table **ProductCategories**, field **ProductCategoryImage** is

Was this information helpful? Yes No

defined as data type **Attachment**. Including the attachment field in a form or report enables the image to display in form view or report view. These images are used in the Fall Catalog report.
